Guidosimplex radial accelerator / brake lever

Gosling push/pull hand controls & steering ball

Brig Ayd push/pull hand controls & steering ball

Left foot accelerator (twin flip pedals)

Lodgeson steering ball mounted secondary controls

Lodgeson lollipop grip with integral secondary controls

Pedal Pals extension pedals

If you are young, disabled and keen to get behind the wheel for the first time, or newly disabled and want to research the variety of different adapted driving controls that will help you get back behind the wheel, Get Going Live! is *the* event for you.

If you need advice about the different adapted controls before you book your test drives, experts from Driving Mobility and Disability Driving Instructors will be available to discuss the options and give independent impartial advice on stands TD10 & TD11 in Hall 2.

Experienced specialist driving instructors will then be on hand to teach young drivers from the age of 15 how to start driving for the first time and advise more experienced drivers about the different adaptations available that will make driving a realistic possibility before letting them try them out with a test drive. From basic push/pull hand controls or left foot accelerators up to the more complex adaptations like joystick steering and electric gas & brake controls found in drive from wheelchair vehicles we should be able to cater for all your requirements – all at the one show!

Combining Get Going Live! with the national Mobility Roadshow ensures that visitors can try out adapted vehicles in a safe and secure environment, and have access to all that the Roadshow has to offer as well.

High Tech adaptations in Drive from Wheelchair vehicles

Mercedes Benz Sprinter

VW Caravelle

Chrysler Voyager

Mercedes Benz Sprinter

4-way joystick (steering, accelerating & braking)

Electric gas & brake with electric mini wheel steering

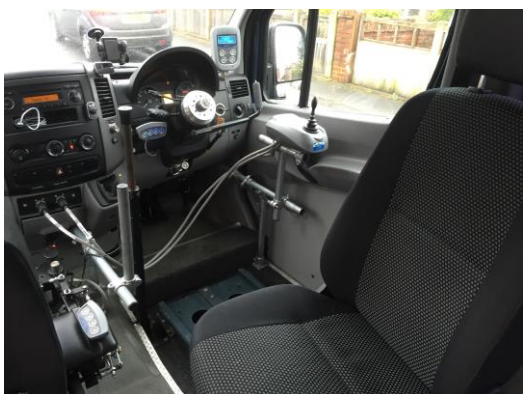

Tiller steering with electric gas & brake

Junction view/blind spot cameras

Drive from wheelchair

Internal transfer from wheelchair to driving seat
